SUMMARY

A motivated software engineering undergraduate dedicated to solving real-world problems by creating innovative, user-centric solutions. I have actively applied my skills in various academic projects and hackathons, enjoying collaboration with fellow developers. My volunteering with IEEE has further enhanced my leadership and teamwork abilities, and I am eager to contribute to a forward-thinking team.

EXPERIENCE

Asst. Webmaster, IEEE Student Branch of SLTC Jul 2024 - Jul 2025

- Managed social media platforms.
- Contributed to developing the official website of the SLTC IEEE.

EDUCATION

BSc. (Hons) in Software Engineering Mar 2022 - Mar 2026
Sri Lanka Technology Campus

- GPA: 3.00
- Thesis on "Enhancing AI-Driven Non-player Character (NPC) Interactions Through Advanced Prompt Engineering".

Diploma in Spoken English Mar 2022 - Jun 2022
ICBT Kandy Campus

G. C. E. Advanced Level 2018 - 2021
St. Thomas' College, Matale

- ET - C, SFT - C, ICT - B

G. C. E. Ordinary Level 2012 - 2017
St. Thomas' College, Matale

- 8 A grades, 1 B grade

TECHNICAL & PROFESSIONAL SKILLS

HTML/CSS	Python	ReactJS	Figma
JavaScript	Java	Dart	GitHub
PHP	C	Flutter	AWS

SOFT SKILLS

Graphic Designing	Prompt Engineering	Attention to Detail
Video Editing	Web Content Creation	Creativity

PROJECTS

Enhancing AI-Driven NPC Interactions Through Advanced Prompt Engineering

- Developed AI-driven Non-Player Characters (NPCs) to replace traditional scripted interactions, aiming to create a more dynamic and immersive gaming experience.
- Demonstrated the concept through a 2D chat-based role-playing game, utilizing advanced prompt engineering techniques to generate realistic and adaptive NPC behaviors.
- Technologies used: TypeScript, React, Vite, Node.js, CSS, Gemini API.

AI-Powered Career Guidance System

- System to help users identify suitable tech roles based on their personality traits and skills.
- Technologies used: Next.js, TypeScript, Tailwind CSS, shadcn/ui, Axios, Python, Flask/FastAPI, Pandas, scikit-learn.

Smart Fan Control Using Image Processing

- A touchless fan control system designed to interpret hand gestures for adjusting fan speed and power, offering a seamless, contact-free experience.
- Technologies used: OpenCV, MediaPipe, Python, Arduino.

Hotel Reservation System

- A simple system that allows users to make hotel reservations through a web interface, with client-side validation and server-side processing.
- Technologies used: PHP, JavaScript, HTML/CSS, SQL.

VOLUNTEERING

IEEE Student Branch SLTC:

- **Sri Lanka Arduino Challenge 2025** - Content Creation Team Head
- **IEEE GISLA 2024** - Design Team Deputy Head / Content Creator
- **Codemia v4.0** - Content Creation Team Deputy Head
- **IdeaniX Generation 01** - Design Team Member / Content Creation Team Member

CERTIFICATIONS

Fundamentals of Quality Assurance - Alison

How to create a Jira SCRUM project - Coursera

Codemia v4.0 - IEEE Computer Society of SLTC

C for Beginners - Great Learning

Web Design for Beginners - University of Moratuwa

Learn Basics of Adobe Photoshop CC 2022 for Beginners - Udemy

IP Addressing and Subnetting - Zero to Hero - Udemy

Python Programming - SITEC Education Matara

Web Development - SITEC Education Matara
